WROT Copper Fitting Features:

- Made from commercially pure copper mill products per ASTM B75 Alloy C12200: Standard specification for seamless round copper tube for general engineering application pressure fittings.
- **Third Party Certified to NSF/ANSI 61 & 372**

NEW

MATERIAL SPECIFICATIONS:
Materials: ASTM B75 Alloy C12200
Chemical components of copper tube: Cu content ≥ 99.9%, P content 0.015-0.040%, essentially lead free.
PRODUCT CERTIFICATIONS:
ASME/ANSI B16.22: Wrot Copper and Copper Alloy Solder Joint Pressure Fittings
MSS SP-104: Wrot Copper Solder Joint Pressure Fittings For dimensions, material and workmanship.
NSF/ANSI 61: Drinking Water System Component.

PLASTIC THREAD INSTALLATION TIPS & QUICK REFERENCE GUIDE

Excerpts from LASCO Fittings, Inc. "Threads Installation Tips & Quick Reference Guide". For full text go to lascofittings.com

THE "DO'S AND DON'TS" OF ASSEMBLING THREADED PLASTIC FITTINGS

Today, there are millions of miles of plastic piping with threaded fittings, providing reliable, leak-free service. However, a tiny percentage of those threaded plastic fittings may leak or break. The reason for this is improper assembly of threaded joints.

Here are some of the Do's and Don'ts of PVC joint assembly:

- Don't over-tighten joints by giving them "one more turn to be sure. Do finger tighten plus one or two turns - No More.
- Don't wrap PTFE tape or PTFE paste or pipe dope to add bulk to or to lubricate the joint. Do use a sealant for threaded joints.
- Don't use "stronger" Schedule 80 threaded fittings on the assumption that they may solve the problem of splitting through over-tightening.
- Do use only Schedule 40 threaded fittings with Schedule 40 pipe and fittings.

On threaded male PVC fittings each successive thread is slightly larger in diameter than the one before it. Female threads get successively smaller. This is called taper and the amount of taper is specified (1¼ degrees) in the American National Standard B2.1. All pipe manufacturers voluntarily follow these standards to assure their customers they are receiving quality materials.

Because the threads are tapered, additional turns cause the female part to stretch or undergo "strain." This will split the female fitting just as a wedge, driven by a sledgehammer, will split a tree stump.

The amount of strain increases as the size of the pipe decreases. Therefore it is easier to split smaller diameter threaded joints than larger ones. It is also easier to over-torque smaller diameter fittings because their resistance to torque is less.

The right way to assemble a threaded PVC joint-Schedule 40 or 80 is finger tight plus one to two turns-no more.

LEAK-FREE JOINTS

Since sealant or tapes that contain PTFE reduce the friction, they will mask the loads and stress being applied during the tightening sequence. Because of the clearance between the root or valley and the peaks of the mating threads, there is a small spiral leak path that extends the length of the threaded connection. This leak path must be sealed, and this is the reason for thread sealant. The lubricating qualities of thread sealants can cloak the resistance the installer expects when tightening a joint. This leads to over tightening to get the "feel" of being leak free, while exerting the excessive stress of wedging the male and female components together.

The procedure to make leak free joints that will not cause split fittings is simple! Make-up the joint to finger-tight, not hand tight, then tighten 1 to 2 more turns. This method will provide a joint that is leak tight without causing excessive stress within the connection. It is important to realize that pipe thread sealant, especially those made with PTFE, lubricate the threads and mislead the installer to believe the joint is not tight.

DON'T USE PTFE TAPE, PTFE PASTE OR PIPE DOPE. DO USE A SEALANT.

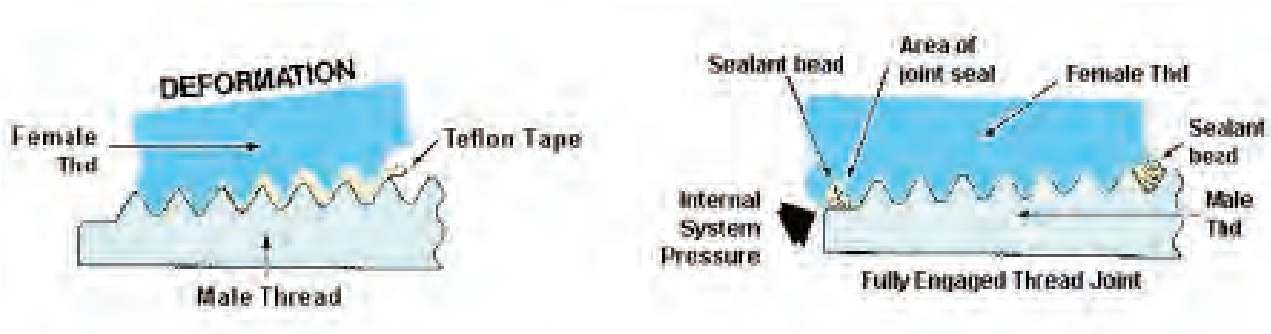

PTFE tape, PTFE paste and pipe dope is intended for metal pipe and fittings. Metal to metal fitting joints are more difficult to tighten than plastic; the surfaces tend to gall without the aid of such lubricants as PTFE or pipe dope. Plastic fittings do not need this lubrication.

When PTFE tape is wrapped around plastic male threads it adds to the strain and tensile stress. The tendency of most installers is to incorrectly wrap several thicknesses of tape around the male threads, increasing stain and stress further.

PTFE paste and pipe dope, just like PTFE tape, make threaded joints slippery. Their use on PVC fittings can be an invitation to over-torque.

When working with threaded plastic fittings do use a proper sealant. The right sealant for threaded joints is non-hardening, compatible with plastic and does not add slipperiness.

A non-hardening compound is forced by water pressure into potential points of leakage, thereby performing a true sealing function. Tapes and hardening pastes permit a leak path to develop when a joint is backed off, mechanically flexed, or expands with rising temperatures.

A sealing compound must be compatible to plastics. Many brands of pipe sealant contain oils, solvents or carriers that can damage plastic. A proper sealant must be certified by the manufacturer to be harmless to the fitting material and to not contaminate fluid in the pipe.

Finally, a sealing compound must not lubricate the joint to the point that over-tightening is encouraged. Several sealants on the market meet all these requirements.

Why Sealant is Recommended in Threaded Joints

Teflon tape, when compressed between male and female threads in PVC fittings joints, can cause deformation, leading to leakage, and possibly, to cracked female fittings.

Sealant, when compressed between threads, flows outward to achieve an effective seal against leakage in PVC fittings.

DO NOT USE LASCO FITTINGS FOR COMPRESSED AIR OR GASES.
DO NOT TEST PVC PIPING SYSTEMS WITH COMPRESSED AIR OR GASES.
DO NOT USE FITTINGS WITH LIQUIDS NOT RECOMMENDED BY LASCO.
MODIFICATIONS OF FITTINGS VOIDS THE WARRANTY.

STANDARDS AND SPECIFICATIONS – SCHEDULE 40

- ASTM D-1784 – Rigid Poly (Vinyl Chloride) (PVC) Compounds and Chlorinated Poly Vinyl Chloride (CPVC) Compounds.
- ASTM D-2466 – Socket type Poly (Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 40.
- ASTM F-1970 – Standard Specification for Special Engineered Fittings, Appurtenances or Valves for use in Poly (Vinyl Chloride) (PVC) or Chlorinated Poly (Vinyl Chloride) (CPVC) Systems.
- MATERIAL – LASCO Schedule 40 Fittings are produced from PVC TYPE 1, CELL Classification 12454-B.
- O-RINGS are produced from a Buna-N (Nitrile) material.
- LISTINGS – NSF/ANSI Standard 61, Annex G: Drinking Water System Components Weighted average lead content of $\leq 0.25\%$ and is in compliance with California's Health & Safety Code Section 116875 (commonly known as AB1953) NSF/ANSI Standard 14: Plastics Piping system Components and Related Materials. Why Westlake Pipe & Fittings Recommends Sealant in Threaded Joints

Teflon tape, when compressed between male and female threads in PVC fittings joints, can cause deformation, leading to leakage, and possibly, to cracked female fittings.

Sealant, when compressed between threads, flows outward to achieve an effective seal against leakage in PVC fittings. Use a non-hardening thread sealant that is labeled safe for PVC.

⚠ WARNING: care must be taken to avoid overtightening during assembly of threaded joints – do not overtorque. Generally 1 to 2 turns beyond finger tight is all that is required to obtain a leak-tight seal for most sizes. Do not use both a tape sealant and a paste sealant simultaneously. Contact Westlake Pipe & Fittings Technical Services for additional information.

! NOTE: Some oil based thread pastes and pipe joint compounds contain ingredients that attack PVC or CPVC materials. Suitability of thread paste sealants must be clearly established prior to use. Contact thread paste manufacturer confirm chemical compatibility prior to use.

FLANGE INSTALLATION GUIDELINES

FLANGED CONNECTIONS: Properly installed flanged connections provide a transition fitting to join alternate piping materials, a mechanical means to connect to valves and other equipment, and when joining piping systems where frequent dismantling may be required. The grooved face of the flange provides a liquid tight seal on the gasket when flanges are properly assembled, supported, and proper torque is applied to the bolts.

GASKETS: Full face 1/8" thick elastomeric material with a Shore A Durometer hardness of 50-70; gasket material selected must be compatible with application and fluids conveyed. Variations in gasket material and shore hardness may affect sealing torque required.

FLANGE DIMENSIONS: Flange ring bolt hole dimensions conform to ANSI B 16.5 Class 150 bolt pattern. Threaded flange hubs are tapered iron pipe size threads per ANSI B2.1. Socket flange hubs conform to ASTM D2467 tapered socket dimensions.

PRESSURE RATING: Maximum pressure rating for molded flanges 1/2" thru 12" diameter 150psi non-shock at 73°F. Appropriate temperature de-rating factors must be applied when working at elevated temperatures greater than 73°F.

BOLTS AND BOLT TORQUE: Select proper bolt size, quantity, length, and washers for the specific sizes of flanges and equipment being assembled. Always use two (2) wide flat washers per bolt (one under the head and one under the nut). Threads should be clean and well lubricated.

⚠ WARNING: USE ONLY LUBRICANTS COMPATIBLE WITH PVC OR CPVC MATERIAL.

FLANGE ASSEMBLY:

Once the flange hub is correctly joined to the pipe and allowed to cure properly, and the piping system is supported properly, the method for joining two flanges is as follows:

1. Make sure the system is properly supported and aligned, and that mating surfaces of flanges being joined are not separated. Do not use bolts to align system or to pull flanges together.
⚠ WARNING: STRESS INDUCED FROM MISALIGNMENT OR IMPROPER SUPPORT WILL DAMAGE THE FLANGE.
2. With the gasket in place, align all bolt holes of mating flanges by rotating the flange ring into position.
3. Insert all bolts, flat washers (two standard flat washers per bolt), and nuts.
4. Be certain the faces of the mating surfaces are flush against the gasket prior to bolting down the flanges.
5. Using the illustrated bolt-tightening sequence shown below, tighten all the nuts by hand until snug. Once snug by hand, tighten the bolts diametrically opposite each other (180°) using the sequence shown with a torque wrench. Apply uniform pressure across the flange by tightening in stages of 5 ft-lb increments until final torque values shown in the following table are obtained. Do not over tighten.
⚠ WARNING!: OVER TORQUING WILL DAMAGE THE FLANGE.
6. Care must be taken to avoid bending stresses to the flange when mating to raised faced flange, metallic flange, stationary flanged objects or wafer-style valves. The plastic flange, attached pipe, fitting, and or valve must be supported properly to eliminate stress on the plastic flange.

RECOMMENDED FLANGE BOLT TORQUE FOR WESTLAKE PIPE & FITTINGS PLASTIC FLANGES

! NOTE: Bolt length based on connecting two (2) Westlake Pipe & Fittings flanges, two (2) flat washers, and nut. Actual Bolt lengths required and torque values necessary to seal will vary based on type of equipment being joined. Adjustments will need to be made when assembling flanges to accommodate valves and other equipment.

Reference ASME B16.5 and ASME NM-1 as applicable. Contact Westlake Pipe & Fittings Technical Services for additional information.

! NOTE: certain applications may require flange bolts to be re-torqued at least 24 hours after gasket installation depending on flange materials being joined (i.e. transition from PVC to HDPE), and gasket material selected. Work with gasket manufacturer for proper material selection and other gasket design recommendations prior to installation. When evaluating gasket material, be certain to include any surge pressure that could be caused by opening valves and starting pumps.

Use primer and appropriate heavy-bodied solvent cement for materials being joined and allow to cure properly prior to flange assembly - follow Westlake Pipe & Fittings solvent welding instructions and/or contact Westlake Pipe & Fittings Technical Services for additional information.

Galvanized Long Pattern Compression Fitting Features:

- Bodies made of steel tubing (GC10), malleable iron (GC10C)
- End nuts made of malleable iron.
- Galvanized finish
- Buna-N gaskets on domestic fittings.
- SBR gaskets on GC10C series.
- Maximum rated service temperature for gaskets: 212°F (100° C).
- GC10C manufactured for AGI in an ISO9002 facility.

WARNING: Designer and/or contractor must provide suitable anchoring of piping to prevent pull-out from fittings when applications subject piping to external forces such as ground shift and temperature variations that cause linear pipe contraction.

Repair Clamp Features:

- Pipe repair clamps eliminate the need for costly pipe replacement for simple leaks.
- Non-corrosive clamp band is made of annealed stainless steel.
- Nuts and bolts are cadmium plated with a chromate finish; heavy duty hex nut with washer.
- Lugs are made of annealed, malleable iron for maximum strength and permanence; iron phosphate finish.
- Neoprene gasket with maximum rated service temperature of 212° F (100°C).
- Imported

Coupling, Cap Features:

- Flexible couplings for joining all types of sewer pipe, including transitions from one type to another.
- NO-HUB couplings for joining cast iron pipe sections
- End Caps for capping cast iron, steel, PVC and ABS pipe.
- 300 Series stainless steel clamps
- Meets IAPMO File #0317, BOCA ESI RR#90-68, SBCCI PST&ESI Report #9483B
- CSA Approved

DrainGate

DrainGate Features:

- High impact plastic gate and one way hinge allows water to flow out.
- Keeps pests and debris from clogging pipes.
- Fits 4" or 6" pipe.
- Easy to install.
- Fits sewer and drain pipe, corrugated pipe, DWV & Sch 40 pipe.
- Kit contains bracket arm, drain gate and stainless steel screw.
- Packed one per plastic bag with directions.
- Master packed in point of purchase counter display.

The "one-way" DrainGate swings open to allow the free flow of water.

The "one-way" design prevents gate from swinging in the opposite direction.

Imported Malleable Iron Fitting Features:

- Class 150 malleable iron pipe fittings
- Suitable for water, steam, air, gas and oil
- All fittings are air pressure tested
- Working pressure: Max: 300 psi @ -20°F to 150°F., Min 150 psi @ 350°F
- Made in China
- Tensile Strength: Min 48000 psi (330 MPa)
- Elongation: Min 8%
- Hardness: Max HB150

Specifications:

Material: ANSI/ASTM A197
 Dimensions: ANSI B.16.3 fittings
 ASME/ANSI B.16.39 unions
 Threads: ASME/ANSI B.1.20.1

ISO 9002

All class 150 imported malleable iron pipe fittings are manufactured under a quality control program complying with CSA B-51 specifications.

Canadian Registration Number OA5312.5C

Third party certified to NSF/ANSI 61&372.

Domestic Malleable Iron Fitting Features:

- Class 150 malleable iron pipe fittings
- Suitable for water, steam, air, gas and oil
- All fittings are air pressure tested
- Working pressure:
 - Max: 300 psi @ -20°F to 150°F.
 - Min 150 psi @ 366°F
- Made in USA
- **Galvanized: Third party certified to NSF/ANSI 61&372.**

Malleable Iron Fitting Specifications:

Material:	ASTM A197
Dimensions:	ANSI/ASME B16.3 ANSI/ASME B1.20.1
Pressure ratings:	ANSI/ASME B16.3
Coatings:	ASTM A153, A165
